## ABSTRACT OF THE DISCLOSURE

## ALTERNATIVE FLIP CHIP IN LEADED MOLDED PACKAGE DESIGN AND METHOD FOR MANUFACTURE

A semiconductor package is disclosed. The package includes a leadframe structure comprising a die attach region and plurality of leads. A molding material is molded around at least a portion of the leadframe structure, and comprises a window. A semiconductor die comprising an edge is mounted on the die attach region and is within the window. A gap is present between the edge of the semiconductor die and the molding material.
